## Steps to Change a Fender Flare

---

1. **Prepare your new fender flare** for installation. The preparation process may include painting the flare to match the color of the vehicle or simply cleaning it.
2. **Wash the interior of the wheel well.**
3. **Remove the bolts and/or fasteners** from old fender flare using a ratchet and socket set. You may have to reach behind the fender to access these bolts more easily.
4. **Remove fender flare** by pulling it away from the fender or quarter panel. Start with one side of the fender flare and slightly pull out. You may use a flat head screw driver.
5. **Remove fender flare retainer** (only if the vehicle is equipped with one).
6. **Reinstall in reverse order.**
7. Pat yourself on the back!
