

Steps to Change a Fender Liner Splash Shield

Note: Uninstalling the wheel makes it easier to change the fender liner. However if that is not an option then proceed with the following steps:

1. **Turn the steering wheel all the way in one direction.** This will allow better access to the fender liner.
2. **Remove all the accessible clips or fasteners** from the fender liner.
3. **Turn the steering wheel in the other direction** to remove the remaining clips.
4. **Remove the old or damaged splash shield** by pulling it away from the vehicle.
5. **Reinstall in reverse order.**
6. Mount the wheel back on and pat yourself on the back!
