Steps to Change a HVAC Blower Motor

1. **Locate the blower motor under the passenger side dash.** Removing the dash may be necessary to access the unit.
2. **Disconnect the blower motor electrical connector.**
3. **Remove the retaining screws** to the blower motor assembly.
4. **Remove the box and blower motor assembly.**
5. Remove the blower motor retaining screws to **remove the motor from the box.**
6. **Reinstall in reverse order.**
7. Verify that the blower motor operates at all speeds and the system produces hot & cold air.
8. Close the dashboard and pat yourself on the back!
